Practical – III

Roll No.: T002	Name: Afsha Amjad Mujawar
Class: TYIT	Batch: 1
Date of Assignment: 02/09/2026	Date/Time of Submission: 02/09/2026

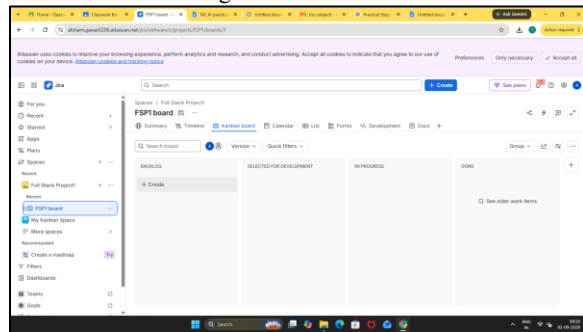

A. Create and configure Issue Types (Epic, Story, Task, Bug):

Issue Type: An Issue Type in Jira represents a particular category of work that needs to be completed in a project.

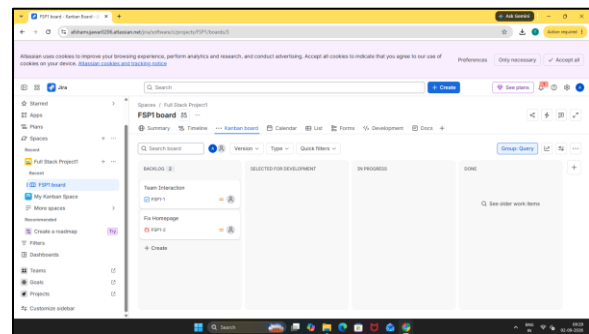

Important Issue Types:

- Epic: A large piece of work that can be divided into multiple smaller stories or tasks.
- Story: A feature or requirement written from the user's perspective.
- Task: A specific piece of work that needs to be completed.
- Bug: A problem or error in the software that needs to be fixed.

1. Open Jira and log in to your account.
2. Go to Settings or Jira Administration.

3. Select Issues from the settings menu.
4. Click on Issue Types.
5. Select Add Issue Type to create a new issue type if required.
6. Enter the name and description of the issue type.
7. Select the appropriate type, such as Epic, Story, Task, or Bug.
8. Save the issue type.

9. Open the required project and go to Project Settings.
10. Configure the issue types according to the project's requirements.
11. Ensure that the required issue types are available for creating and managing project work.

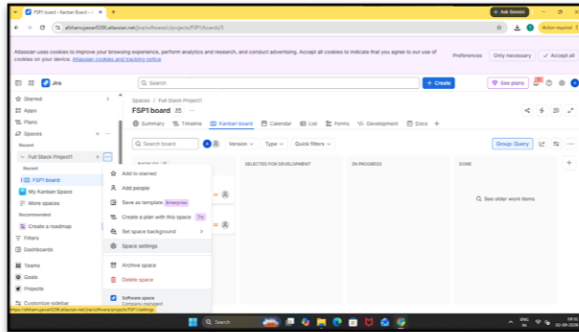

Important Terms:

- Issue: Any work item, requirement, task, or problem tracked in Jira.
- Configuration: The process of setting up features according to project requirements.
- Epic: A large requirement containing multiple related pieces of work.
- Story: A requirement that describes a feature from the user's point of view.
- Task: An individual activity assigned to complete specific work.
- Bug: A defect or error that causes incorrect software behavior.

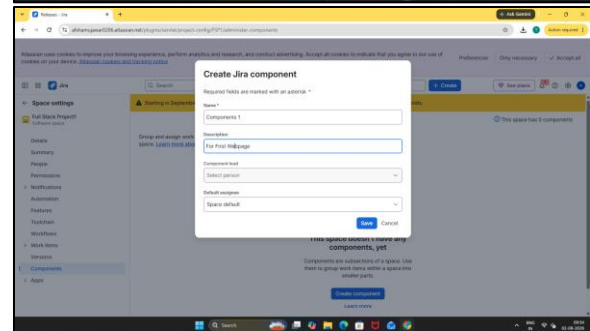

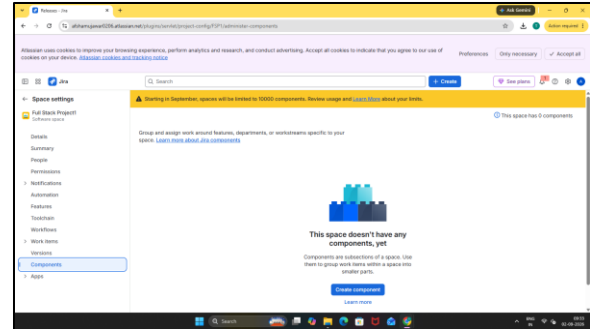

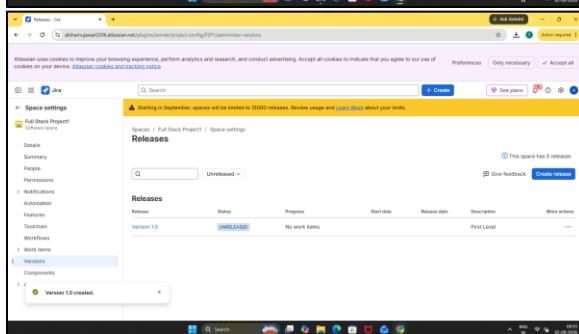

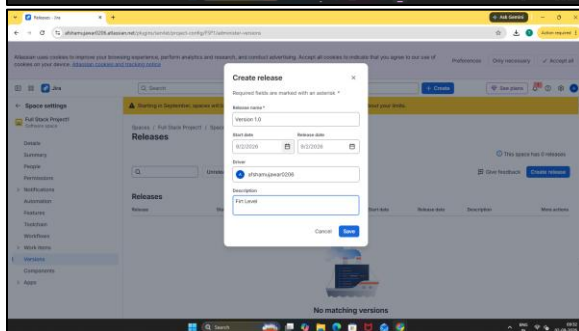

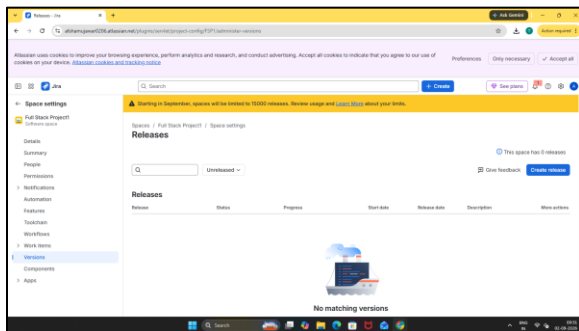

B. Create Components and Versions:

Component: A component represents a specific part, module, or area of a project. It helps organize issues according to different parts of the application.

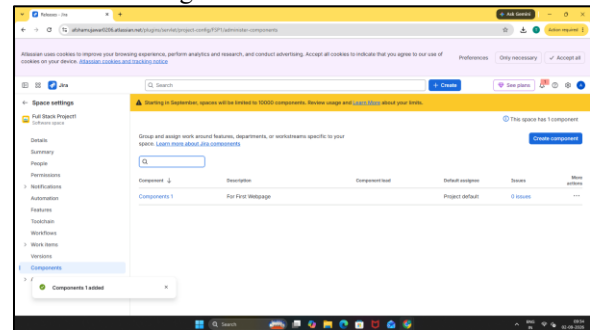

1. Open the required Jira project.
2. Go to Project Settings.
3. Select Components from the settings menu.

4. Click Create Component or Add Component.
5. Enter the component name.
6. Add a short description, if required.
7. Select a component lead if applicable.
8. Choose a default assignee if required.
9. Click Save or Create.

10. The component can now be selected while creating issues.

Important Terms

- Version: A specific release of a software project.
- Release: The process of making a completed version of software available.
- Release Date: The planned date on which a version will be released.
- Fix Version: The version in which a particular issue is planned to be fixed.
- Project: A collection of related work and issues managed together in Jira.
